Featured Case Study

Skills-Based Job Search & Mock Interview Program (ADDIE + Action Mapping)

Overview:

This end-to-end learning experience was designed to help aspiring tech professionals move from **unfocused job applications** to **skills-aligned roles** and **confident interview performance**. The program emphasizes **real-world outcomes**, focusing on measurable application of skills, rather than mere completion of content.

Key Design Principles:

- **Learner personas and empathy-driven design:** Each learner's background, experience, and confidence level were considered to create a personalized learning journey.
- **Scenario-driven, action-oriented pathways:** Instead of passive content, learners engage in realistic job search tasks, such as researching roles, matching skills, and answering interview questions in context.
- **Practice-first mock interviews:** Mock interviews are framed as skill application exercises, giving learners the opportunity to perform, receive feedback, and iterate.
- **Structured feedback and reattempt loops:** Iterative cycles reinforce learning, promote confidence, and build mastery over time.
- **Psychologically safe and inclusive design:** The program reduces anxiety and creates an environment where learners can take risks, learn from mistakes, and build resilience.

ADDIE Alignment:

- **Analysis:** Identified learner needs, confidence gaps, and misalignment between skills and job roles.
- **Design:** Developed scenario-driven exercises, mock interview frameworks, and skills-to-role mapping pathways.
- **Development:** Created guided exercises, templates, and practice-first activities for interview preparation.
- **Implementation:** Facilitated structured job-search labs, iterative mock interviews, and reflection activities.
- **Evaluation:** Measured improvement in role alignment, interview confidence, and successful application targeting.

LXD Focus:

- **Autonomy & engagement:** Learners could navigate pathways based on readiness and interest.
- **Real-world relevance:** Activities mirrored actual job portal searches, recruiter expectations, and interview scenarios.
- **Feedback as a learning tool:** Feedback was actionable, specific, and reusable, shifting focus from judgment to growth.
- **Psychological safety:** Mock interviews framed as practice and reflection opportunities, reducing stress and building resilience.

Results:

- Learners applied to roles more aligned with their skills and career goals.
- Increased confidence and competence in interview performance.
- Measurable improvements in practical outcomes, such as targeted applications and quality of interview responses.

Impact:

This program demonstrates the power of **learner-centered, performance-driven design**, where **skills application, reflective practice, and iterative feedback** combine to produce tangible career outcomes. It exemplifies how **ADDIE and Action Mapping** can be used to bridge the gap between learning and real-world performance.
