□ Learner Personas Aligned to ADDIE & LXD Principles

This learning experience was designed using the **ADDIE model** to systematically prepare learners for **technical job search and mock interviews**. ADDIE was chosen to clearly analyze learner needs, design realistic practice opportunities, and continuously improve performance through feedback. The design emphasizes **practice-first activities, iterative feedback, and real-world interview scenarios** rather than content-heavy instruction.

The experience applies key **Learning Experience Design (LXD) principles** including **learner-centered design, psychological safety, scaffolding, multiple learning pathways, and feedback-driven learning**, grounded in **adult learning and experiential learning theories**.

The learner personas represent **diverse adult learners preparing for technical roles**, varying in background, confidence, and communication skills, and were used to guide inclusive, confidence-building mock interview and job search experiences.

1□□ Career Switcher (Non- Tech Background)

Profile: Professionals transitioning from administrative, teaching, sales, or operations roles into tech

Pain Points: Struggle to translate existing skills into tech-relevant language; lack confidence in interviews

Needs: Clarity on skill-to-role alignment, domain fit, and confidence in applying transferable expertise

LXD Focus: Empathy-driven design, relevance, and learner motivation

ADDIE Alignment

Analysis:

Map existing skills, experiences, and career aspirations against potential tech domains (e.g., data analytics, cloud support, software testing).

Design:

Create targeted skills-to-role mapping exercises highlighting how current capabilities fit specific tech roles.

Development:

Develop story-based scenarios reflecting realistic career transition journeys into chosen tech domains.

Implementation:

Facilitate guided exercises where learners apply their skills to real-world tech role contexts.

Evaluation:

Assess learner reflection on role-domain fit, confidence growth, and readiness for tech opportunities.

2□□ Entry- Level Tech Graduate

Profile: Recent graduates with solid theoretical knowledge but limited hands-on experience

Pain Points: Overapplying to generic roles, difficulty identifying suitable opportunities

Needs: Market awareness, understanding of niche roles, and strategic targeting

LXD Focus: Exploration and learner autonomy

ADDIE Alignment**Analysis:**

Conduct a skills inventory and map against current market demand to identify gaps and opportunities.

Design:

Create interactive activities for exploring skill clusters, alternative job titles, and role pathways.

Development:

Develop comparative exercises that highlight different career tracks, responsibilities, and growth potential.

Implementation:

Facilitate guided job-search labs, including scenario-based practice for tailoring applications.

Evaluation:

Track improvements in role targeting, application relevance, and learner confidence in navigating the job market.

3☐☐ International Job Seeker

Profile: Learners new to the local job market and hiring norms

Pain Points: Difficulty adapting resumes and interview behavior to local expectations

Needs: Cultural context, communication guidance, and feedback

LXD Focus: Accessibility, inclusion, and cultural fluency

ADDIE Alignment

Analysis:

Identify gaps between prior experience and local hiring expectations, including resume style and interview norms.

Design:

Create examples for resume positioning and culturally aligned responses.

Development:

Build mock interview exercises with rubrics tailored to local norms and communication expectations.

Implementation:

Conduct guided practice interviews with structured feedback loops.

Evaluation:

Assess improvements in communication clarity, cultural appropriateness, and confidence in interviews.

4☐☐ Underconfident but Skilled Learner

Profile: Technically capable learners who struggle to demonstrate their skills in high-pressure situations

Pain Points: Freezing or underperforming during interviews

Needs: Supportive, low-risk practice environments that build confidence

LXD Focus: Psychological safety and confidence building

ADDIE Alignment

Analysis:

Identify specific confidence barriers and stress triggers during interviews.

Design:

Create low-stakes mock interview simulations with progressive difficulty.

Development:

Build iterative feedback loops that highlight strengths and areas for improvement.

Implementation:

Facilitate repeated practice interviews in a safe, supportive environment.

Evaluation:

Track confidence growth, improved performance under pressure, and readiness for real interviews.

5□□ Mid- Career Tech Professional

Profile: Experienced professionals with strong technical expertise but feeling stagnant in their career growth

Pain Points: Relying on outdated job search strategies; limited visibility in niche roles

Needs: Strategic career repositioning and targeted job search methods

LXD Focus: Career relevance, efficiency, and actionable guidance

ADDIE Alignment**Analysis:**

Assess career plateau, skill-to-market fit, and role aspiration gaps.

Design:

Map potential niche roles and career pathways aligned with current skills.

Development:

Create advanced tools and exercises for targeted job searches and role filtering.

Implementation:

Conduct focused job search sprints with real-world scenarios and actionable guidance.

Evaluation:

Measure effectiveness by quality of opportunities identified and improved alignment with career goals.

6□□ Return- to- Work Learner

Profile: Learners re- entering workforce after a break

Pain Points: Resume gaps, reduced confidence

Needs: Narrative rebuilding

LXD Focus: Identity rebuilding

ADDIE Alignment: -

Analysis: Assess impact of career break on skills, confidence, and role alignment; identify transferable skills and growth during the gap.

Design: Create structured storytelling frameworks that reframe career gaps as learning, adaptation, and value creation.

Develop: Develop strength-based reflection prompts, resume gap narratives, and guided interview response templates.

Implement: Facilitate resume storytelling exercises and mock interviews focused on confidently articulating career breaks.

Evaluate: Measure clarity, confidence, and consistency of learner narratives through mock interview feedback and self-reflection.

7□□ Neurodiverse Learner

Profile: Learners who prefer structure and predictability

Pain Points: Ambiguous instructions

Needs: Clear expectations, Explicit guidance, consistency, and reduced uncertainty

LXD Focus: Cognitive accessibility

ADDIE Alignment

Analysis:

Identify cognitive load triggers, preferred learning patterns, and areas where ambiguity creates friction.

Design:

Design learning experiences with consistent layouts, clear task sequencing, and visible success criteria.

Development:

Develop structured templates, step-by-step instructions, and rubric-based expectations for all activities.

Implementation:

Implement a predictable learning flow with repeated patterns across modules and clearly signposted transitions.

Evaluation:

Evaluate reduction in cognitive load through task completion accuracy, learner feedback, and confidence in independent execution.

8□□ ESL Learner

Profile: Technically capable learners navigating language fluency in professional interview contexts

Pain Points: Difficulty articulating structured responses under time pressure

Needs: Language scaffolding and low-risk communication practice

LXD Focus: Linguistic accessibility and cognitive offloading for high-stakes communication

ADDIE Alignment

Analysis:

Identify gaps between technical understanding and verbal expression, including vocabulary, pacing, and sentence structuring challenges.

Design:

Design structured communication frameworks (e.g., STAR and sentence stems) that reduce cognitive load during interviews.

Development:

Develop guided rehearsal tools, response exemplars, and optional recording activities to support self-review.

Implementation:

Implement repeated, low-stakes practice opportunities with targeted feedback on clarity, structure, and confidence.

Evaluation:

Evaluate improvement through increased response coherence, reduced hesitation, and learner confidence during mock interviews.

9□□ Self- Directed Fast Learner

Profile: Highly motivated learners who acquire skills rapidly and prefer independent progress

Pain Points: Disengagement caused by slow, linear learning sequences

Needs: Flexible pacing and meaningful challenge

LXD Focus: Learner autonomy and adaptive progression

ADDIE Alignment

Analysis:

Assess learner readiness, prior knowledge, and self-efficacy to identify candidates for accelerated pathways.

Design:

Design non-linear learning pathways that allow learners to bypass foundational content and access advanced practice early.

Development:

Develop optional stretch challenges, scenario-based tasks, and mastery checks that reward depth over repetition.

Implementation:

Implement self-paced navigation with clear signposting for fast-track and deep-dive options.

Evaluation:

Evaluate success through sustained engagement, quality of outputs, and demonstrated mastery rather than time-on-task.

10 Anxious Job Seeker

Profile: Learners experiencing high stress and worry around job applications and interviews

Pain Points: Fear of rejection, overwhelm, and performance anxiety

Needs: Psychological safety, structured guidance, and confidence-building

LXD Focus: Emotional safety and learner well-being

ADDIE Alignment**Analysis:**

Identify anxiety triggers, stress points, and learner confidence levels through surveys or pre-assessments.

Design:

Create predictable, scaffolded weekly structures and low-stakes exercises to reduce uncertainty and build confidence.

Development:

Craft supportive, encouraging feedback language and scenario-based practice that normalizes setbacks.

Implementation:

Facilitate mock interviews and job-search simulations framed as safe practice, not assessment.

Evaluation:

Measure reduced anxiety indicators, increased participation, and improved self-reported confidence over time.

Visual Persona × Design Strategy Grid

Persona	Multiple Paths	Scaffolding	Reflection	Feedback	Psychological Safety
Career Switcher	☐	☐	☐	☐	☐
Entry- Level Graduate	☐	☐	☐	☐	—
International Job Seeker	—	☐	☐	☐	☐
Underconfident Learner	—	☐	☐	☐	☐
Mid- Career Professional	☐	—	☐	☐	—
Return- to- Work	—	☐	☐	☐	☐
Neurodiverse Learner	—	☐	—	☐	☐
ESL Learner	—	☐	☐	☐	☐
Self- Directed Learner	☐	—	☐	—	—
Anxious Job Seeker	—	☐	☐	☐	☐

Outcome: A scalable, inclusive, and adaptive learning experience that supports varied career goals, confidence levels, and learning preferences while delivering consistent performance results.
